

YOOMAHN

A Real-Life Oriented Venture Capital Fund
Powered by Blockchain Technology

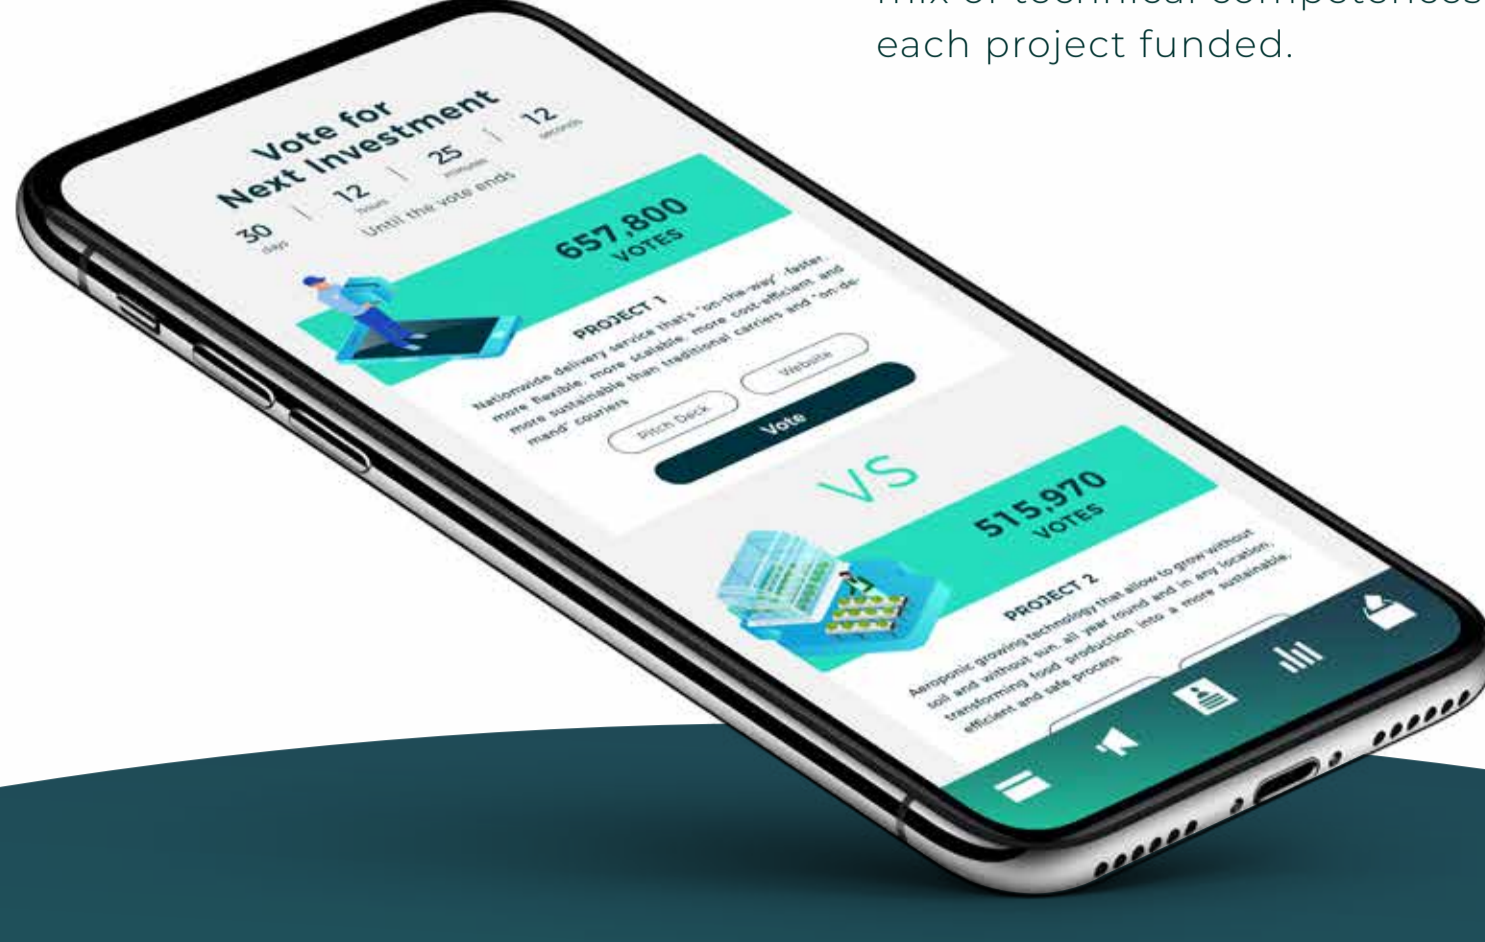

What's YOOmahn

YOOmahn is the first Tokenised Venture Capital Fund that invest in Real-Life projects closing the gap between virtual and venture capital investments.

Our smart contract allows us to perform the initial fund-raising with extreme safety and in transparency, issuing YOO tokens to each investor.

At the same time, every YOO token holder can actively participate in the decision-making process choosing which project to invest in, thanks to a voting system integrated into our platform.

We don't invest in crypto projects, but we focus our investments in the real-life business. Finally, the strong point of YOOmahn is to provide not only funds but also a mix of technical competences to maximise the return on each project funded.

The Problems with Venture Capital Market and ICOs

1 Too much speculation

Many Funds which raised capitals through ICO's re-invest in high-speculative crypto projects, with no diversification of risks.

2 Too far from the "real-life" business

The funds who are purely investing in crypto projects are not creating something FOR the future, but only speculating ON the future.

3 Lack of know-how

Crypto Venture Capital Funds limit their activity to pure speculative financing, without bringing know-how to help the growth of the projects.

4 Illiquidity for funds investors

Normally, a Venture Capital partnership is a 10-year blind-pool. Investing is reserved only for those who can afford to "forget" about their capital during such an extended period.

The YOOmahn Solution

1 Diversification

Our investments are not pure financial speculation but will be a well-diversified portfolio of projects to minimise risks.

2 Real business world

The Fund will look to any possible opportunity of investment in the traditional business world.

3 Super service

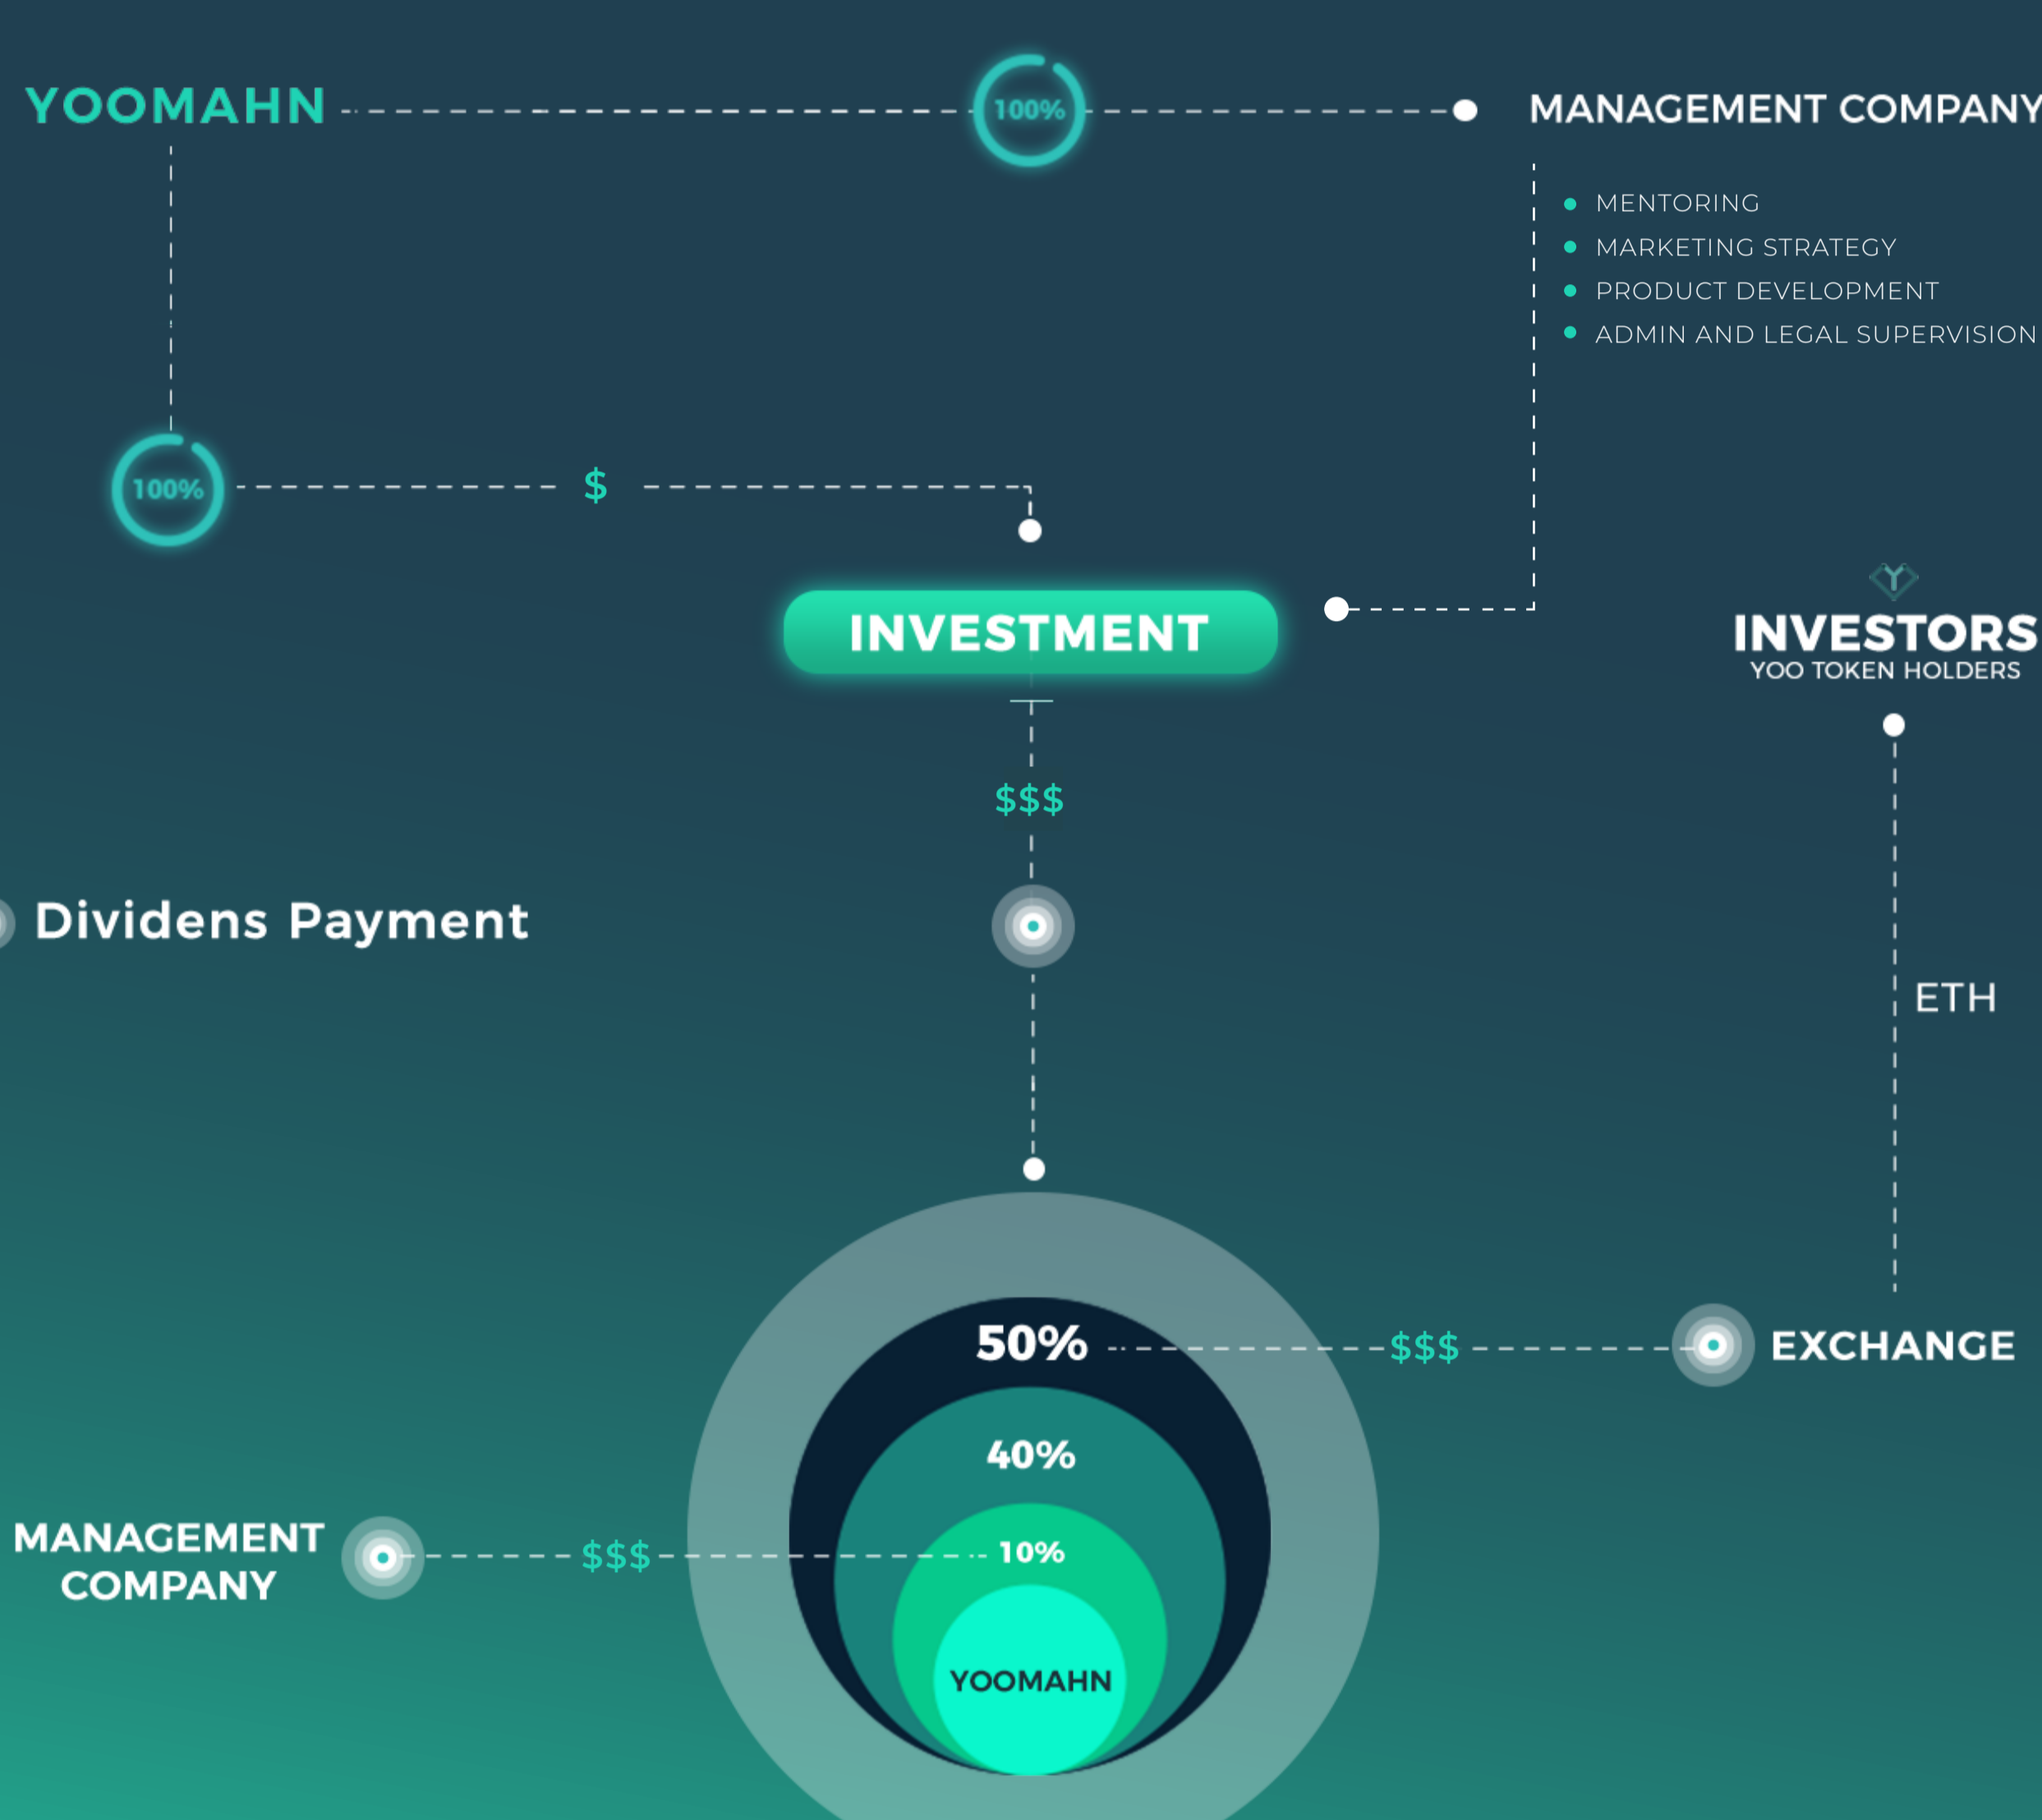

YOOmahn will provide not only cash but also all the management and technical support to let our investment projects have healthy and fast growth.

4 Liquidity = Inclusivity

Tokens issued by YOOmahn to investors are liquid assets. We make Venture Capital more inclusive because, with liquidity, any investor can participate, no matter the size of the investment or the timing.

Fund Structure

Investing Process

What we invest in

<p>Industry: Fintech Project Stage: Seed Target Invested Amount: \$ 400,000 Expected Exit Amount: > \$ 1,500,000 after 12 months</p>	<p>Industry: Ag Tech Project Stage: Pre-Seed Target Invested Amount: \$ 250,000 Expected Exit Amount: > \$ 2,000,000 after 18 months</p>
